Testes - Service

```
1  @Test
2  void createBooking_ShouldCreateWhenNoConflict() {
3      when(itemRepository.findById(1L)).thenReturn(Optional.of(item));
4      when(bookingRepository.findByIdAndStatus(1L, BookingStatus.APPROVED))
5          .thenReturn(List.of());
6      when(bookingRepository.save(any(BookingRequest.class)))
7          .thenAnswer(invocation -> invocation.getArgument(0));
8
9      LocalDate start = LocalDate.now().plusDays(1);
10     LocalDate end = LocalDate.now().plusDays(5);
11
12     BookingRequest result = bookingService.createBooking(1L, 2L, start, end);
13
14
15     assertNotNull(result);
16     assertEquals(BookingStatus.PENDING, result.getStatus());
17     long days = java.time.temporal.ChronoUnit.DAYS.between(
18         LocalDate.of(2025,12,1), LocalDate.of(2025,12,5)) + 1;
19     assertEquals(15.0 * (double) days, result.getTotalPrice());
20     verify(bookingRepository, times(1)).save(any(BookingRequest.class));
21 }
```

Testes - Playwright

```
1  @Test
2  void testBookingsPageShowsLoginPromptWhenNotAuthenticated() {
3      String baseUrl = "http://localhost:3000";
4      page.navigate(baseUrl + "/bookings");
5
6      page.waitForTimeout(1000);
7
8      // Should show some form of authentication requirement
9      boolean needsAuth = page.isVisible("text=/log.*in/i") ||
10                          page.url().contains("/auth") ||
11                          page.isVisible("text=Please Log In");
12
13      assertTrue(needsAuth, "Should indicate authentication is required");
14  }
```

Testes - Cucumber

```
1 Feature: Book Item
2   As a renter
3   I want to book an item
4   So that I can use it
5
6 Scenario: Renter books an item
7   Given a user "renter@example.com" exists
8   And an item "Switch" exists owned by "owner@example.com"
9   When the user "renter@example.com" books "Switch" for tomorrow
10  Then the booking status should be "PENDING"
```

Testes - Integration

```
1  @Test
2  @XrayTest(key = "TGR-27")
3  @Tag("integration")
4  void createBooking_ShouldReturn200AndCreateBooking() throws Exception {
5      String json = ""
6          {
7              "itemId": %d,
8              "userId": %d,
9              "startDate": "2035-12-01",
10             "endDate": "2035-12-05"
11         }
12         """.formatted(item.getId(), renter.getId());
13
14     mockMvc.perform(post("/api/bookings")
15         .contentType(MediaType.APPLICATION_JSON)
16         .content(json))
17         .andExpect(status().isOk())
18         .andExpect(jsonPath("$.id").isNumber())
19         .andExpect(jsonPath("$.itemId").value(item.getId()))
20         .andExpect(jsonPath("$.userId").value(renter.getId()))
21         .andExpect(jsonPath("$.status").value("PENDING"));
22 }
```
